

We Claim:-

1. A system for enabling entry and/or display of data in a database, the system comprising a processor for  
5 controlling the display of a form having a number of data fields corresponding to data items stored or to be stored on a database; and a store for storing, for at least one data field, information enabling attributes relating to that data field to be displayed upon user command while the  
10 form continues to be displayed.
2. A system according to claim 1, wherein the stored information defines one or more data items from the database.
3. A system according to claim 1, wherein the processor  
15 provides a user interface to enable a user to define information which is stored in the store corresponding to the at least one data field.
4. A system according to claim 1, wherein the processor is adapted to respond to mouse commands, the user command  
20 comprising a right click of the mouse when the mouse icon is aligned with a data field.
